

Ideal for:

*Desktop Printing Convenience
for Textile Samples and Tags*

*Compatible with Full Range
of Epson Desktop Printers*

*Quality Print on
Variety of Fabrics*

Ecological Water-Based

*Broad Selection
of Bright Colors*

Cost Effective

*Heat curable.
No steaming required.*

FabricFast Ink for Digital Desktop Printing

***Pigmented Water-Based Ink Provides
Convenient and Cost-Effective Textile Printing***

From the comfort of a cost-effective desktop printer, FabricFast provides lightfast, color-intense digital textile printing that matches the color and fastness properties of production screen inks.

FabricFast ink provides a simplified, inexpensive and flexible means of printing fabric designs, samples and proofs.

Quality Print

FabricFast (patent pending) is a new, pigmented ink jet textile ink available in a wide color gamut. Because it features an optimized binder concentration similar to those used in conventional screen printing inks, FabricFast ink provides quality print, matching the hand, lightfastness, washfastness and crockfastness of screen printing pastes.

This greatly simplifies textile proofing and sampling, as the colors printed from the ease of a desktop printer closely match the screen printing pastes used in production. In this way, FabricFast ink cuts the costs associated with misprints stemming from color discrepancy between proofing and production print runs.

The small size of FabricFast's pigment particles keeps printheads from clogging over time, ensuring consistent high quality print. Color appearance and washfastness can be further enhanced with the use of certain "prepared for print," ink jet ready or coated fabrics.

Diverse Applications

The FabricFast desktop application revolutionizes textile designing, sampling and proofing and can also be used for printing fabric labels and tags.

Textile samples can be printed on ink jet ready fabrics as well as fabrics with paper backing. There are several commercially available brands of "Textile Paper" that can be used with desktop printers. Cotton, Tyvek and other fabrics with paper backing can be obtained from textile suppliers. In addition, thermal transfer paper can be used to transfer the FabricFast printed image onto textiles.

It's flexible pigmented formulation makes FabricFast ink ideal for printing on cotton, cotton / polyester, nylon, rayon, wool, blends and silk fibers.

Compatibility Made Easy

FabricFast inks are designed for seamless integration with existing printing systems.

FabricFast ink is now available in one liter bottles and is compatible with commercial bulk ink supplies and with the full range of Epson desktop printers.

Wide Color Gamut

FabricFast inks are available in a wide variety of colors including:
Primary colors: Cyan, Magenta, Yellow and Black
Tone colors: Light Cyan, Light Magenta and Gray

Additional colors are available upon request. Our color selection is highly flexible!
