

Features:

2 Inch (50mm) Tall Printed Images

Durable Industrial Design

*Print Flexibility - Graphics,
Alphanumeric & Bar Codes*

Hassle-Free Maintenance

3 Year Warranty

384Jet™ Printhead

Cost-effective, High-Quality Ink Jet Printing

A Cost-Effective Printing Solution

Ink jet printing directly onto packaging has several noteworthy benefits over alternative packaging solutions. Labels can be up to eight times more expensive than ink jet printing. Having an ink jet printer on the factory floor allows for greater printing flexibility and requires less space than an inventory of assorted pre-printed secondary packages.

Durable Design

Industrial environments are rough on printing equipment. Airborne fibers, sealing glue and factory dust are part of the reality of the factory floor. The 384Jet is robustly designed to deliver premium performance in even the harshest environments.

The industrial design of the 384Jet printhead features a stainless steel orifice plate and patented shock-resistant compliance chambers. Enhanced shock resistance helps the 384Jet print clearly even in the face of rough handling or unintentional impact with packaging on the production line.

The 384Jet also features a repairable design which can lead to long-term savings of printhead replacement costs when compared to non-repairable, disposable printheads.

Print Flexibility

The 384Jet ink jet printhead can print a wide variety of images including high-quality graphics, scannable bar codes and crisp alphanumeric text at production line speeds. This adds great flexibility to printing lines.

For example, a single 384Jet can print a logo, list of ingredients and bar code – all on a single container or it can change the content of the printed images from container to container.

The ability to print-on-demand also adds flexibility to factory floors as there is no need to store and transport large quantities of different pre-printed boxes for each product that is produced.

Automatic Maintenance

The 384Jet features the Automatic Maintenance Module™ (AMM™) that routinely purges foreign objects like factory dust from the printhead to ensure consistent high-quality printing performance.

The 384Jet's Automatic Maintenance Module simultaneously enhances printhead durability and minimizes the need for operator intervention, which in turn minimizes maintenance expenditures.

Three Year Warranty

Trident has such high confidence in the durability of the 384Jet that it comes with a three year warranty – the longest printhead warranty on the market !
